1. Explain the difference between an event-driven application and a console-based application. **Event waits for clicks or keys anytime but console run top to bottom**

6. What is the difference between a label and a button? **A label only shows text; a button can be pressed**

8. List three ways to control the layout of a content pane. **Using absolute layout, flow layout, border layout.**

13. What must first be done with numeric data typed in a text field before it can be used in a calculation? **Convert the text string into a double**

15. An application prompts a user to select a name from a list of six names. Which is a better component choice: a text field or a combo box? Explain. **A combo box because it's much easier to select a pre-written name instead of relying on the user to type the name correctly.**
